# Sriteja Valaboju

Bengaluru, Karnataka, India
+91 934-649-3360 sritejavalaboju000@gmail.com linkedin.com/in/sriteja-valaboju-65184717a github.com/Sriteja11

## Education

**Chaitanya Institute of Technology and Science, Hanamkonda** **August 2018 – June 2022**
*Bachelor of Technology in Computer Science Engineering (CGPA: 8.07)* *Warangal, India*

## Experience

**Airbus Group India Pvt Ltd.** **April 2025 – Present**
*Software Engineer* *Bengaluru, India*

- Architected and delivered Augmented BMS, a GenAI-powered chatbot over a corpus of nearly 4,000 interconnected business management documents, serving 80,000 users with 5,000+ monthly active users across Airbus.
- Engineered multi-agent workflows using Google ADK for Advanced Search (Deep Mode) and ABR link-analysis features, incorporating human-in-the-loop checkpoints where needed; also built a Fast Mode leveraging direct semantic search, letting users toggle between Fast Mode and Deep Mode for Advanced Search.
- Owned the end-to-end development of AI Portfolio, a centralized tracking platform for all ongoing Airbus AI projects; built using React, FastAPI, pgvector/Cloud SQL, and Cloud Run with Cloud Build CI/CD pipelines and robust Role-Based Access Control (RBAC) to identify project synergies and automate use-case updates.
- Joined the core AgentAIR team, working on building reusable platform capabilities, foundational components, and integration tools to streamline and accelerate the implementation of AI Agents across Airbus business units.
- Reduced advanced search latency by 75% (2 min → 30 sec) through query optimization and efficient vector retrieval pipelines on Vertex AI in Augmented BMS.
- Cut Docker image sizes across Augmented BMS services — data ingestion by 50%, frontend by 80%, and backend by 10% — and optimized the chunking strategy (33K → 25K chunks), reducing Advanced Search query response time by 60%.
- Refined LLM inference quality by tuning generative configuration (top-k, top-p, temperature) and post-processing pipelines to structure responses and embed contextual document reference hyperlinks inline within chatbot outputs.
- Implemented hallucination detection and response grounding pipelines in Augmented BMS — identifying factually incorrect or unsupported outputs and anchoring responses to source documents, using RAGAS-based evaluation and benchmarking against golden datasets.
- Built full GCP backend infrastructure using Cloud Run, Cloud Functions, Pub/Sub Triggers, Cloud SQL (PostgreSQL), Cloud Logging, and Terraform for IaC, enabling scalable and observable GenAI workloads.
- Developed the React.js frontend for Augmented BMS (conversational UI, advanced/general search, quick-action panels, thinking) and led frontend for AI Forge (Kaggle-like AI collaboration platform) with 50% UI ownership using React.js, Vite, Zustand, and Tailwind.
- Established testing strategy with Jest and Cypress within Jenkins CI/CD; mentored new team members on component architecture and GenAI integration best practices.

**Airbus Group India Pvt Ltd.** **August 2022 – March 2025**
*Associate Software Engineer* *Bengaluru, India*

- Owned and led Vue.js frontend for ModelOps Platform (official Airbus AI Platform), architecting Role Based Access Control and unifying Portal and Monitoring apps under a shell using Vite, Pinia, Chart.js, and a custom Design System.
- Designed architecture and led frontend for ML model creation, SageMaker deployment, and real-time monitoring with drift detection, alerts, and AWS cost/resource optimization dashboards; deployed infrastructure via CloudFormation and Python CDK.
- Co-developed Vue 3 Design System with 50% ownership, building 50+ configurable and reusable components with Storybook documentation aligned with Airbus UI/UX standards.
- Drove official adoption of Vue.js into Airbus engineering guidelines, expanding the component ecosystem beyond React and Angular, enabling faster development and standardization across multiple teams.
- Implemented Jest and Cypress testing within Jenkins CI/CD; bootstrapped frontend clones from ModelOps codebase to accelerate delivery for projects like GraphOps.

## Achievements

**SPOT Award (November 2025) — Airbus**
Recognized for significant contributions to the Augmented BMS development.

**SPOT Award (March 2025) — Airbus**
Recognized for significant contributions to ModelOps Platform, the official AI Platform of Airbus.

**Professional ML Engineer — Google Cloud**

Certified in designing, building, and productionizing ML models to solve business challenges using Google Cloud technologies.

**Advanced Generative AI: Deep Dive (2024) — Google Cloud**
Hands-on training in building, tuning, and deploying generative AI models using Vertex AI.

## Technical Skills

**Languages & Frameworks:** Python, FastAPI, SQL, JavaScript, TypeScript
**GenAI, NLP & LLM:** Google ADK, Vertex AI, Multi-Agent Systems, Human-in-the-Loop, Semantic Search, RAG, pgvector, Hallucination Detection, Benchmarking, RAGAS, LangSmith, Prompt Engineering, Pytorch, TensorFlow, LLMOps, MLOps
**Cloud — GCP:** Cloud Run, Cloud Functions, Cloud Build, Pub/Sub Triggers, Cloud SQL (PostgreSQL), Cloud Logging, Terraform
**Cloud — AWS:** Lambda, S3, DynamoDB, SageMaker, CDK, CloudFormation
**Frontend:** Vue.js, React.js, Vite, Zustand, Pinia, Tailwind CSS, Chart.js, Recharts, Storybook
**Tools:** Git, GitHub, JIRA, Jenkins, Docker, Cypress, Jest, Vitest, Webpack, Figma, Jupyter
